

### Supplemental Figure S1. AMF colonization in tomato roots.

Colonization rate in *R. intraradices*- and *F. mosseae*-colonized tomatoes upon well-watered (NS) and stressed (WS) conditions. Lower case letters denote significant differences attested by Tukey's HSD test ( $P < 0.05$ ). Data are expressed as mean  $\pm$  SD ( $n = 5$ ). F%, Frequency of mycorrhiza in the root system; M%, Intensity of the mycorrhizal colonization in the root system; m%, Intensity of the mycorrhizal colonisation in the root fragments; a%, Arbuscule abundance in mycorrhizal parts of root fragments; A%, Arbuscule abundance in the root system.
